

**Prolex™ Strep** offers a unique method for Lancefield grouping beta-haemolytic Streptococci. Using modified acid extraction reagents developed by Pro-Lab Diagnostics, and blue carboxylated latex particles, results are obtained within one minute at room temperature for groups A, B, C, D, F, and group G. All labels and caps within the kit are colour coded for ease of identification, and presented in easy-to-use, convenient dropper bottles.

**Prolex™ Streptococcal Xtra Select Kit** provides a rapid and reliable platform for the identification of Lancefield Group A and Group B streptococci using only one lytic extraction reagent and specifically labelled blue carboxylated latex particles. This kit is conveniently formatted such that a customer can either select either 2 vials of Group A, 2 vials of Group B or one vial of each. The test has the advantage of offering instant clear results at room temperature using the unique one step extraction procedure.

**Prolex™ Strep Latex Kits**

PL.030	Complete Strep Grouping Kit for Lancefield Groups A, B, C, D, F, & G	60 Tests
PL.041	Any combination of six Latex Reagents for Lancefield Groups A, B, C, D, F, & G	60 Tests
